

FOR IMMEDIATE RELEASE

UNDERWOOD ENGINEERS EXPANDS ITS COMBINED STAFF IN PORTSMOUTH AND CONCORD TO 50 EMPLOYEES

After nearly 40 years as a civil and environmental engineering resource in the Northeast, Underwood Engineers, Inc. has grown to over 50 employees. Underwood Engineers is known throughout Maine, New Hampshire and Vermont as a premier resource for cities and towns to provide professional engineering services for water, wastewater, storm water and infrastructure projects.

Through a carefully managed growth program, Underwood has matched the needs of its clients with talented engineering staff at their Portsmouth and Concord offices. Over 45 staff members are engineers and technicians, with the majority of them holding professional licenses and many have advanced specialized degrees. To manage the growth properly, the strategy of the firm is to hire experienced personnel balanced with new talent.

This growing talent pool has allowed Underwood to serve its clients on increasingly larger and complex projects. In addition to design skills, our team also offers experience in regulatory and municipal settings, as well as construction and utility operating backgrounds. The company maintains its commitment to quality service and hands-on involvement by senior engineering staff and principals on nearly every project.

Underwood Engineers' President, Keith Pratt, says "Our policy of controlled growth has allowed us to manage expansion without abandoning the traditional relationships and quality service that have been the foundation of our business."
